AI cameras check every moving wagon.

Indian Railways scans freight trains as they pass.

01

AI scans

Every wagon, while the train keeps moving

02

AI flags

Open doors, broken locks, tampered seals

03

Human decides

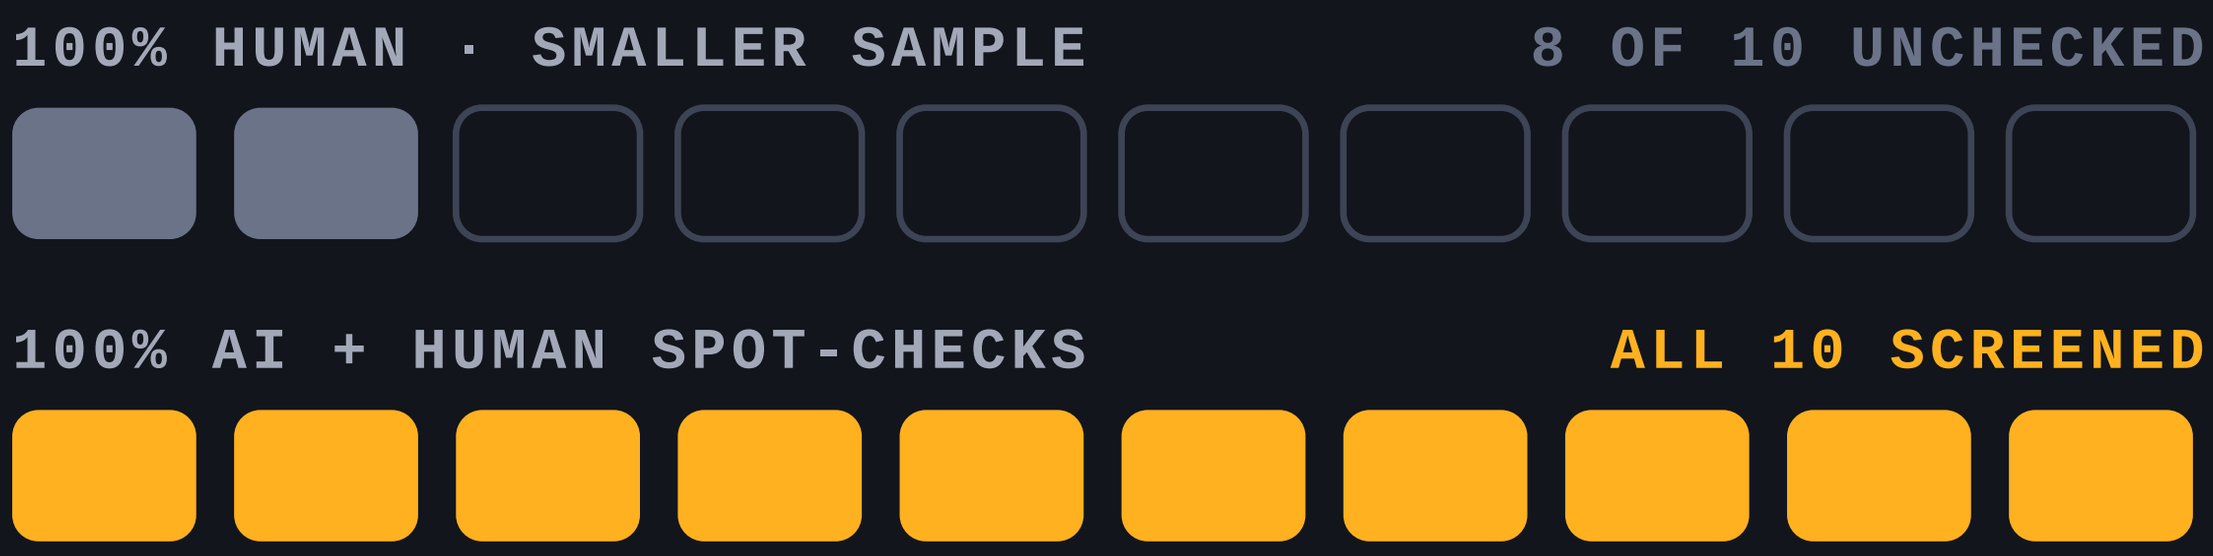

Checks each flag and makes the final call

AI is fast. So what do humans do? Swipe →

Q1

Does 100% AI screening with human spot-checks beat 100% human screening of a smaller sample?

Mostly yes.

BUT

Spot-check what AI clears too.

Mud or shadow can fool it, and the same mistake repeats across many wagons.

Q2

Can a junior inspector override an AI flag?

Not alone.

Anyone can raise a safety concern.
Clearing a flag needs senior approval.

01
Safety concern raised

02
Senior approves

03
Reason recorded

If it goes wrong,
the senior is responsible.

Q3

AI is coming to railways, roads and courts. Train people for what?

Work with AI, not just use it.

01
Check alerts

02
Fix errors

03
Audit decisions

04
Know when not to trust

AI brings speed.

Humans add judgment and responsibility.

THE TAKEAWAY

AI is like a smoke alarm.

It watches every floor, all day, and rings at the first smoke.

ALARM RINGS

Burnt toast

FALSE ALARM

ON THE TRAIN

Mud or a shadow on a wagon

Real fire

REAL DANGER

ON THE TRAIN

A broken lock or tampered seal

THE CATCH

The alarm sounds the same for both.

So a person **walks over, checks, and decides.**

AI detects.

Humans verify.

Humans decide.
